

Experience

User Experience Designer

NGP VAN - May 2013 to Present

As a user experience designer I have led many major projects and redesigns in concert with the rest of our product team. Working as a free-agent in our agile development environment, I have participated in many stages of software development including initial concept, project management, discovery, user-story creation, usability testing, wireframing, and production front-end development. I also took a lead role in the creation of our company's first Pattern Library, and have been a driving force behind more active collaboration between designers and developers.

B2B Web Manager

AudioGO - February 2011 to June 2013 (2 years 5 months)

In charge of overseeing and developing AudioGO B2B web marketing. Responsibilities include coordinating with graphic designers, distributing to publishers, developing and troubleshooting new features for our website, overseeing contractors for web development, and working with sales.
